

# Autowagen Master — complete system manual

**For shop owner & staff.** Walkthrough from opening the app through master data, inventory, buying in parts, and selling on POS. Screens marked **Figure** are for your own PNG captures (see §0).

**Save as PDF:** Chrome or Edge → Ctrl + P → **Save as PDF**.

**Screenshots:** This file is written for detail first. Your images go in docs/manual\_screenshots/. For each **Figure**, save the file with the exact name shown, then remove `<!--` and `-->` around that figure's `<img>` line. See TRAINING\_SCREENSHOTS.md.

## Contents

1. [Using this manual & screenshots](#)
2. [Opening the app & signing in](#)
3. [Dashboard & top menu](#)
4. [EPC — parts catalogue tree](#)
5. [Master data — vehicles](#)
6. [Master data — customers](#)
7. [Master data — suppliers](#)
8. [Inventory — parts \(list & add/edit\)](#)
9. [Inventory — supplier purchases & accounts payable](#)
10. [POS — sales invoices \(start to paid\)](#)
11. [Roles & who can do what](#)
12. [Appendix — screenshot file checklist](#)

## 0 — Using this manual & screenshots

**What you hold.** This is the *full* written guide in one document. It is meant to match what Autowagen Master does today: vehicles you strip or stock, customers you sell to, suppliers you buy from, physical parts, batch purchases, money you owe suppliers, and shop-floor sales (POS).

**Why screenshots matter.** Text tells staff *what* to click; a picture shows *where* it is on their screen. This manual lists every recommended capture with a fixed filename so your folder stays organised.

**How to capture (Windows).** Open the live page in your training database. Press Win + Shift + S, drag around the area, paste into Paint, save as PNG into docs/manual\_screenshots/. Then edit this HTML file and uncomment the matching `<img>` line under that figure.

**Order of training.** New users: read §1 → §2, then either follow §4–§7 (stock in) before §9 (sales), or jump to §9 if someone else already loaded vehicles/parts.

**Figure 0 (optional).** Folder in File Explorer showing manual\_screenshots with a few PNGs (for trainers only).

docs/manual\_screenshots/full-00-readme-folder.png

## 1 — Opening the app & signing in

### 1.1 Browser address

Autowagen Master runs in a normal web browser. On your workshop PC the address usually looks like:

`http://localhost/autowagen-master/` or the hostname your installer gave you.

The first page either sends you to the login screen or to the dashboard if you are already signed in.

**Figure 1.** Browser address bar showing your Autowagen URL (homepage or redirect).

`docs/manual_screenshots/full-01-browser-url.png`

### 1.2 Login

1. Open the login page (`auth/login.php`).
2. Enter your **username** and **password** (your owner creates these in the database or an earlier setup step).
3. Click **Log in**. Wrong passwords may be rate-limited after several attempts (security).

**Figure 2.** Full login form (username, password, submit).

`docs/manual_screenshots/full-02-login-page.png`

### 1.3 Logout

Click your name (top right) → **Logout**. Always logout on a shared PC.

**Figure 3.** Top-right user menu open with Logout visible.

`docs/manual_screenshots/full-03-logout-menu.png`

## 2 — Dashboard & top menu

After login you see the **Dashboard**. The black top bar is the same on (almost) every page.

### 2.1 Menu map

- **Dashboard** — home / overview.
- **EPC** — electronic parts *catalogue* (categories), not your stock count.
- **Master data** — **Vehicles, Customers, Suppliers** (people & companies you work with).
- **Inventory** — **All parts, Add part, Accounts payable (owed), Supplier purchases, New supplier purchase.**
- **POS** — **Sales invoices, New sale.**

**Figure 4.** Dashboard with top navigation visible (full width).

docs/manual\_screenshots/full-04-dashboard.png

**Figure 5.** One dropdown open (e.g. **Master data** or **Inventory**) showing all items.

docs/manual\_screenshots/full-05-nav-dropdown.png

## 3 — EPC — parts catalogue tree

The EPC is a **six-level tree** (e.g. Engine → ... → Variant). You use it to *label* where a part belongs in the catalogue. It does **not** replace inventory: a sellable part still needs a row under **Inventory** → **All parts**.

### 3.1 Browse tree (everyone)

1. **EPC** → **Browse tree**.
2. Click through levels until you reach variants.
3. Use this when you need a standard label for documentation or linking.

**Figure 6.** EPC browse page with at least two levels visible.

docs/manual\_screenshots/full-06-epc-browse.png

### 3.2 Manage tree (owner / admin)

**EPC** → **Manage tree** adds/edits/deactivates catalogue nodes. Day-to-day yard staff rarely need this.

**Figure 7.** EPC admin / manage screen.

docs/manual\_screenshots/full-07-epc-admin.png

## 4 — Master data — vehicles

Each **vehicle** is a unit in your yard: donor car, stock number, stripping status, legal papers, photos, and links to stripped parts.

### 4.1 Vehicle list

1. **Master data** → **Vehicles**.
2. Use search/filters as needed. Columns typically include stock code, make/model, status, papers completeness, yard location.
3. **Add vehicle** opens the editor without an id.

**Figure 8.** Vehicles admin list with at least one row.

docs/manual\_screenshots/full-08-vehicles-admin.png

## 4.2 Vehicle editor (sections)

The edit screen is long; it is grouped into cards: stock & identity, status & specs, acquisition, **legal papers** (logbook, receipt, seller ID, proof of residence — as used in your build), **photos**, notes, yard, and **linked EPC variants**. After save, you can upload scans and photos.

**Important:** Stock code, VIN, and registration plate are uniqueness-checked — duplicates block save.

**Figure 9.** Vehicle edit — top / identity section.

docs/manual\_screenshots/full-09-vehicle-edit-top.png

**Figure 10.** Vehicle edit — legal papers / upload area (any one paper card is enough for the shot).

docs/manual\_screenshots/full-10-vehicle-edit-papers.png

**Figure 11.** Vehicle edit — photos gallery OR “parts stripped from this vehicle” table (if parts exist).

docs/manual\_screenshots/full-11-vehicle-edit-photos-or-parts.png

## 5 — Master data — customers

Customers are buyers (and contacts for on-account). For **Second-Hand Goods Act**-style sales, the system can require **ID document** and **proof of address** scans on the customer *before* certain POS lines can be finalized.

### 5.1 Customer list & modal

1. **Master data** → **Customers**.
2. Add or edit via the modal: individual vs business drives SA ID vs company reg fields.
3. Upload compliance documents; list shows a **Docs N/2** style badge when wired in your build.

**Figure 12.** Customers list.

docs/manual\_screenshots/full-12-customers-admin.png

**Figure 13.** Customer modal with ID / proof-of-address upload cards visible.

docs/manual\_screenshots/full-13-customer-compliance.png

## 6 — Master data — suppliers

Registered suppliers you buy from (as a business). Used when parts are sourced from a supplier rather than a once-off private seller (depending on how you use part source).

1. **Master data** → **Suppliers**.
2. Add contact name, phone, email, payment terms, etc.
3. List and edit like other master tables.

**Figure 14.** Suppliers list with Add / edit visible.

docs/manual\_screenshots/full-14-suppliers-admin.png

## 7 — Inventory — parts (list & add/edit)

A **part** is sellable stock: SKU, name, source (stripped / OEM / replacement / third party), condition, status (on vehicle / available / reserved / sold / scrapped), qty, pricing, yard slot, photos, optional EPC links, and (for third party) compliance document fields or linkage to a **supplier purchase**.

### 7.1 All parts

1. **Inventory** → **All parts**.
2. Filter by source, status, vehicle, search SKU/name/yard.
3. From a **draft invoice** you may land here with a blue **Back to invoice** bar and an **Add to invoice** column (only when opened from POS with a return link; see §9).

**Figure 15.** Parts inventory list with filters.

docs/manual\_screenshots/full-15-parts-admin.png

### 7.2 Add / edit part

1. **Inventory** → **Add part** or pencil icon on a row.
2. Choose **source** — the form shows different fields (vehicle link for stripped, supplier vs private for third party, etc.).
3. SKU may be suggested; condition and status must reflect reality before you sell.
4. Upload photos; link EPC variants if you use the catalogue.
5. **Save**.

**Figure 16.** Part edit — main identity / source / pricing section.

docs/manual\_screenshots/full-16-part-edit-main.png

**Figure 17.** Part edit — photos or TPP / compliance area (whichever your roles use).

docs/manual\_screenshots/full-17-part-edit-photos-or-tpp.png

## 8 — Inventory — supplier purchases & accounts payable

**Supplier purchase** = one buy transaction (from a supplier or private seller) with SHGA-related uploads once, then many **parts** linked to it. **Accounts payable** tracks the bill (ZAR) and payments until you owe R0.

### 8.1 Purchase list & new purchase

1. **Inventory** → **Supplier purchases** — list existing batches.
2. **New supplier purchase** — create header (seller/supplier, dates, uploads as per screen).
3. Open a purchase → add or open linked parts.

**Figure 18.** Supplier purchases list.

docs/manual\_screenshots/full-18-supplier-purchases-admin.png

**Figure 19.** Supplier purchase edit — seller area + SHGA / docs OR parts list (one scroll position).

docs/manual\_screenshots/full-19-supplier-purchase-edit.png

### 8.2 Bill & payments

On the same purchase screen: enter **bill amount** and dates; add **payment** lines (multiple rows for split EFT, etc.).

**Save purchase** vs payment actions follow your trainer's shop rule-of-thumb (see supplier PDFs in docs/).

**Figure 20.** Purchase edit — bill / payments block.

docs/manual\_screenshots/full-20-purchase-bill-payments.png

### 8.3 Accounts payable report

1. **Inventory** → **Accounts payable (owed)**.
2. Review balances by purchase / party.

**Figure 21.** AP report (owed) with at least one row.

docs/manual\_screenshots/full-21-ap-report.png

### 9.1 New sale & invoice list

1. **POS** → **New sale** creates a **draft** and opens the editor.
2. **POS** → **Sales invoices** lists draft/final/void; open any row to continue.

**Figure 22.** Sales invoices list.

docs/manual\_screenshots/full-22-invoices-admin.png

### 9.2 Draft — customer & lines

1. Select **Customer**, invoice date, optional **Due date** (on account), notes → **Save draft**.
2. Add lines: **Select item...** (search available parts), or numeric **Part ID**, or open **All parts** from the coloured links in the modal and use **Add to invoice** on available rows.
3. **Manual line** for labour/fees (no stock).
4. Watch the **Lines** header: large running **R ... incl. VAT** total updates with each line.
5. Remove a line with **×** while still draft.

**Figure 23.** Draft invoice — customer + Lines table + bold total badge.

docs/manual\_screenshots/full-23-invoice-draft-lines.png

**Figure 24.** **Select item...** modal with search + results.

docs/manual\_screenshots/full-24-invoice-search-modal.png

**Figure 25.** Parts list opened from invoice (**Back to invoice** + optional **Add to invoice**).

docs/manual\_screenshots/full-25-parts-from-invoice.png

### 9.3 SHGA (yellow box)

If a line is **stripped** or not **new** condition, the customer usually needs ID + proof-of-address files. The app blocks **Finalize** until the **selected customer** has those uploads. Edit customer → upload → return to invoice.

**Figure 26.** Invoice showing SHGA badge on a line and/or yellow reminder card.

docs/manual\_screenshots/full-26-invoice-shga.png

### 9.4 Finalize

1. Confirm every line, customer saved, compliance satisfied.

2. **Finalize invoice** → confirm. System assigns invoice number, updates part stock / sold as designed.

**Figure 27.** Final invoice header showing **INV-...** number (mask real customers if publishing).

docs/manual\_screenshots/full-27-invoice-final-header.png

9.5 Payments & print

- 1. **Remaining** shows what the customer still owes; **Add payment** until paid (or leave balance for true credit terms).
- 2. **Print** / PDF uses the letterhead area in the app — if the black bar is missing in Edge, turn on **Background graphics** in print settings.

**Figure 28.** Payments section with at least one payment row or empty form.

docs/manual\_screenshots/full-28-invoice-payments.png

**Figure 29.** Print preview or printed PDF first page (optional).

docs/manual\_screenshots/full-29-invoice-print-preview.png

**More POS detail.** For a second deep document only about the invoice screen, also print `invoice_screen_full_guide.html` (zones A–F, S, P, etc.).

10 — Roles & who can do what

Your installation defines users with a **role** (e.g. owner, admin, manager, staff, viewer). Only some roles may add parts, finalize sales, manage EPC, or see prices. The exact matrix follows how your `auth_check.php` gates each page — if a menu item is missing, the login you used does not have that permission.

**Figure 30 (optional).** Top-right badge showing role name (e.g. owner).

docs/manual\_screenshots/full-30-user-role-badge.png

Appendix — screenshot file checklist

Copy this table when batch-capturing. Every file lives in `docs/manual_screenshots/`.

| #  | Filename                  | What to capture          |
|----|---------------------------|--------------------------|
| 00 | full-00-readme-folder.png | Optional: folder of PNGs |
| 01 | full-01-browser-url.png   | Browser URL              |
| 02 | full-02-login-page.png    | Login                    |

| #  | Filename                                 | What to capture          |
|----|------------------------------------------|--------------------------|
| 03 | full-03-logout-menu.png                  | Logout menu              |
| 04 | full-04-dashboard.png                    | Dashboard                |
| 05 | full-05-nav-dropdown.png                 | Menu dropdown            |
| 06 | full-06-epc-browse.png                   | EPC browse               |
| 07 | full-07-epc-admin.png                    | EPC manage               |
| 08 | full-08-vehicles-admin.png               | Vehicles list            |
| 09 | full-09-vehicle-edit-top.png             | Vehicle edit top         |
| 10 | full-10-vehicle-edit-papers.png          | Vehicle papers           |
| 11 | full-11-vehicle-edit-photos-or-parts.png | Photos or stripped parts |
