

AUTOWAGEN MASTER

Client handout — **Sales summary (period)** report · what it shows · how to run it · sample screen (illustration only).
Suitable for accountants, silent partners, or staff training.

1 · What this report is for

The **Sales summary** helps you answer, for any date range:

- **How much did we sell over the counter / POS?** (totals from **finalised invoices** dated in your range).
- **How much cash / EFT / card did we actually record as received** in that same calendar period?(sum of payment lines by their **paid date** — sometimes different from the sale date).
- **Who were our busiest customers?** (ranked list for final sales in that range).
- **Staff vs labour lines:** how many invoice lines linked to physical **parts** vs free-text **manual** lines (labour/fees).

Important limits. This report uses **workshop POS invoices** only. Guest orders from your **public website** (**WEB-...** orders) are managed under **Reports** → **Web shop orders**, not on this screen. Customer **returns / proper credit notes** as formal documents are **not** in the app yet — use your normal bookkeeping process until that module exists.

2 · The two headline numbers clients ask about

Idea	What the report counts	Use when ...
Sales turnover	Each final invoice total (incl. VAT) whose invoice date falls inside From → To .	You want turnover for a month/quarter aligned to <i>invoice date</i> (traditional “what we invoiced”).
Payments in	Payment rows logged on invoices, summed by each row's paid date inside the range.	You want money that hit the til / bank during the month, even if the sale was invoiced earlier or later.

These two totals are **meant** to differ when customers pay later, pay deposits, or straddle weekends — that is normal.

3 · How to run this report (staff — numbered clicks)

Replace **YOUR-SITE** with your real address (examples: <http://localhost/autowagen-master> on a workshop PC or your live shop URL).

1. Start Apache + database (your host handles this if you only use live hosting).
2. Open the browser → go to login: **YOUR-SITE/auth/login.php**
3. Sign in with a staff username that has permission to see **Reports**.
4. On the **black top menu**, click **Reports**.
5. Click **Sales summary (period)**.
6. Set **From** (start date) and **To** (end date) → click **Apply**.
7. Review the coloured summary cards (final sales · drafts · payments) and scroll through **Top customers** and the invoice list.

8. To send a snapshot to someone: click **Print / PDF** → in the printer list pick **Save as PDF** → save the file → email or WhatsApp send the PDF.

4 · What the screen looks like (sample — illustration only)

Below is a **simplified sketch** with example numbers — your real totals will vary. It is meant for training and briefing — not audit evidence without opening the live system.

ILLUSTRATION ONLY — FABRICATED NUMBERS · NOT LIVE DATA

AUTOWAGEN — Sales summary

Invoice date from 2026-05-01 to 2026-05-31 (Johannesburg) · POS invoices only

Final sales (invoice dates)

24 invoices

R 187,450.00

Draft (same range)

3 invoices

R 4,120.00

Payments (paid dates)

Bank + cash + card

R 163,200.00

TOP CUSTOMERS (FINAL · INCL. VAT)

Customer	Invoices	Turnover
ABC Panels CC	6	R 42,300.00
Walk-in — cash	18	R 31,890.50
Motors & More	2	R 18,040.00

Further down the real page: **void** counts, **part vs manual** line counts, and a table of up to **200 invoices** with **Open** links back to each invoice.

5 · Short Q&A for clients

Q: Is this VAT return ready?

A: It is a management summary off the POS data. Your tax practitioner may still want your full invoice file and receipts — this speeds up conversation, not replacing SARS filings.

Q: Why are “sales” and “payments” different this month?

A: Many shops invoice on day 28 and receive EFT on day 2 of the next month. Use the explanation in section 2 above.

Q: Where is the website turnover?

A: Use **Reports** → **Web shop orders** and your own bank recon for deposits from online buyers.
