

Autowagen Master — training guides

Plain-language steps for **shop staff** using the system day to day. Open each link in **Chrome** or **Edge**. To save a handout: `Ctrl + P` → **Save as PDF**.

Pause / shutdown — pick up where you stopped → PDF

Before switching off the PC: save files, `git push`, one line at top of `CLAUDE.md` §9 + what's next, optional copy of key `.md` files into `docs/md_backups/YYYY-MM-DD/`, optional phpMyAdmin DB Export. When you return: read `CLAUDE.md` §10 → new chat paste from `HOW_TO_START_NEW_CHAT.md`.

Open: [Shutdown handoff checklist](#) → [Print / PDF](#)

Developer laminate — Git + changelog (one page)

Ultra-compact: **triple write** (`CHANGELOG.md` + `CHANGELOG.html` + `CLAUDE.md` §9), daily `git push` steps, Vim escape. Print landscape optional in browser if text feels tight.

Open: [Developer quick sheet](#) → [PDF](#)

Git start → finish — Laragon terminal → GitHub

Owner / IT: Linear PDF-style sheet — open Laragon/Cursor terminal, `cd` to the project, `git status`, `git add .`, `git commit -m`, `git push`, GitHub Personal Access Token as password, Credential Manager fixes, “everything up-to-date”, Vim escape.

Open: [Git Laragon terminal — full flow](#) → [Print / PDF](#)

Add staff users — viewer / manager / POS

Owner / IT: There is no “Users” screen in the app yet — new logins go into MySQL table `users`. Detailed PDF-style notes: roles table, Laragon `password_hash` command, phpMyAdmin Insert steps, logout reset SQL, testing.

Open: [Add users — full guide](#) → [Print / PDF](#)

Database updates — full replace vs keep customer data → PDF

Owner / IT: Two paths — (1) replace entire database (empty DB + import / risks), (2) incremental `sql/*.sql` migrations so **customers & business rows stay** while new tables/columns arrive. Backups, DEFINER/import pitfalls, standard script order.

[Open: SQL / database update guide → Print / PDF](#)

Install on a new PC (IT / owner)

Laragon, database, secrets.local.php, SQL order, copying data from another machine. Save as PDF the same way (Ctrl + P).

[Open: Client PC install →](#)

Complete system manual (start → finish)

Main handout for clients: login, dashboard, EPC, vehicles, customers, suppliers, parts, supplier purchases, accounts payable, POS, **public web shop + stripping catalogue + enquiries + AR + backups** — step by step. Includes **31 core figure slots** (full-01 ... full-30 + role) plus optional shop/AR screenshots **full-31...full-36**. Add your PNGs under docs/manual_screenshots/ and uncomment each matching .

[Open: Complete system manual →](#)

Project change log — what we shipped & when

Every meaningful update should add a dated entry (**Recorder + time UTC+2**) to CHANGELOG.md and the HTML mirror → easy history and printable PDF.

[Open: CHANGELOG \(HTML → Print PDF\) →](#) · CHANGELOG.md — best for Git “go back” in Cursor

Engine & shop data — long PDF notes

Owner / documentation: EPC levels under Engine, tables (parts, part_epc_links, epc_full_view), Engines submenu lanes vs EPC, SQL file list. Print to PDF the same way.

[Open: Engine & shop data notes \(print to PDF\) →](#)

Public website (shop) — where data comes from

For staff: which screens to use (**Inventory → Edit part**, EPC link, **List on public website**), Engines menu lanes (naming rules), stripping stock, SKU vs customer view, local vs live database.

[Open: Shop — staff data guide →](#)

Money reports — illustrated staff guide

Accounts payable vs receivable, statements, web shop orders: where to click, what each column means, fake “screenshot-style” layouts for training clients. Same print → PDF as other guides.

[Open: Reports guide \(Money + web orders → PDF\)](#)

AR report + customer statement — every section explained → PDF

Screenshot-style walkthrough for **Reports → Accounts receivable** (alerts, filters, by customer vs by invoice, Balance vs AR cr. vs Refund) and for the printable **customer statement** (toolbar, totals, WhatsApp/email limits, invoice grid columns).

[Open: AR report & statement — detailed notes → PDF](#)

Credit notes — how balances stay consistent → PDF

Linked to original **INV-...**, stock restore on finalize, **AR reduction** vs **cash refund**, and why **invoice / AR report / customer statement** use the same maths. Includes **viewer role** vs **public shop** for advertising.

[Open: Credit notes system guide → Print / PDF](#)

Credit notes — AR reduction vs cash refund → PDF

Detailed note: what each dropdown means **today** (balances are the same; cash adds refund fields), numeric example, and **optional future** accounting split — for staff + accountant conversations.

[Open: AR vs cash refund explained → Print / PDF](#)

Sales summary report — client handout → PDF

For **accountants, partners, or clients**: what the **Sales summary (period)** report measures, difference between invoice-date turnover and payment-date cash-in, **numbered steps** to run it, and an **illustrated sample screen** (not live data).

[Open: Sales summary — client PDF handout →](#)

Sales invoice (POS)

Draft invoices, search parts, add lines, customer & SA compliance (SHGA) checks, finalize, record payments, print.

[Open: Sales invoice — full guide →](#)

Supplier purchases (quick sheet)

Short A–G sheet: one screen, main actions — good for the counter or a laminated page.

[Open: Supplier purchase — quick sheet →](#)

Supplier purchases (full guide)

What each section is for, why it matters, when to use it, and how — batch buys, bills, accounts payable.

[Open: Supplier purchase — full guide →](#)

Note: These guides describe the **software screens**. Your shop's own rules (pricing, refunds, who may finalize sales) stay your internal policy. If something in the app changes, ask your supplier for an updated PDF.
